NitroSDK Cygwin Package Explanation

NITRO-SDK

03/27/2004
SPD Environment Design Group, Nintendo Co.,Ltd.

Red Hat's Cygwin package is required for the NITRO-SDK build.

We apologize for the inconvenience, but until we are prepared to provide this package please select and download the Cygwin tools required for the Nitro-SDK build from the official Cygwin site at http://cygwin.com.

The following is a list of the packages that we installed for the Cygwin environment. SDK build behavior is confirmed for this package.

You cannot build with the Cygwin environment (beta20) that we distributed as the Nintendo GameCube development environment.

If you suspect that some trouble has occurred due to Cygwin version differences, refer to the following list and install a package that has a matching version.

You can output the same list with the `cygcheck -c` command.
